NOVAMED SURGERY CENTER

McRae Enterprises LLC was in charge of the construction management of an updated interior finish. While coordinating with NovaMed staff and performing work around the surgery schedule, we were able to complete flooring replacement, wall covering removal and painting.

Project: #10695
Architect: Leslie Lewis & Associates
Location: New Albany, Indiana

The improvements met State requirements for the surgery center and created high quality finishes without disrupting daily business practices.

The project included:

- Protection of non-effected areas, blocking off and sealing of HVAC systems
- Stripping of the existing vinyl wall covering
- Drywall finishing to achieve a smooth, paintable finish
- Paint application
- Flooring demolition
- Excessive, required floor prep for new flooring
- Installation of 200+SY of commercial carpet
- Installation of 200SF of hard surface flooring
- Commercial air scrubbing/dust collection

McRae Enterprises scheduled these tasks to take place during weekends. McRae Enterprises had to coordinate with NovaMed staff to schedule cleaning crews to return the surgery suite to its medically clean state before surgeries scheduled for Monday morning occurred. When finished, the staff was grateful to have fresh flooring and a brighter work area.
